INTRODUCTION

Date: 02/04/2026

To,
Beyond Walls Technologies Pvt. Ltd,
Pune.

Subject: Computer Forensic Extraction Report

Dear Sir,

With reference to the above subject, I have received a request from you to conduct cyber forensic Audit. I have completed your case as per our standard procedures, our analysis has been reported on 02/04/2026,

Scope of Work:

Conduct forensic Extraction of devices (One Laptop) identified by the client for the following events:

1. Computer forensic extraction of the system and identification of data transfer from outside the organization if any.

Terms and Condition:

1. The report has indicated the status of recovered data.
2. All data taken from devices for the purpose of analysis will be destroyed immediately after the report submission.

Digital Forensic Analyst
AETHERIS TECHNOLOGIES PVT. LTD

FORENSIC ANALYSIS ON (Ex-1 Darshan Laptop)

TOOLS USED FOR ACQUISITION AND EXTRACTION

Sr No	Tool Name
1	Magnet AXIOM Examiner v7.2.0.36145
2	Access Data® FTK® Imager 4.7.1.2

FORENSIC IMAGING

Details of Laptop acquisition are given below:

Sr. No	Custodian Name	Evidence Tag	Acquisition Started	Acquisition Finished	Image Hash SHA1
1.	Darshan	Ex-1	Fri Mar 27 15:20:04 2026	Fri Mar 27 16:36:28 2026	802855631ae7e5056dad1e9f2e6 78a3529fe9a1c

Forensic imaging has done of Laptop provided by (Andheri, Mumbai) in target Hard drive. Details of the respective hard disk drives are given below:

Exhibit Details					
Custodian Name	Type	Drive Model	Drive Serial No.	Capacity	Location
Darshan	Laptop	LITEON L8H- 256V2G-41 M.2 2280 256GB SED	TW0PV3P455085 66MH0H8	256 GB	Pune

A. OPERATING SYSTEM

1. OPERATING SYSTEM INFORMATION:

This refers to details about the installed OS (Windows, macOS, Linux, etc.), including version, system settings, user accounts, boot logs, and configurations. It's foundational for understanding how the device was used and by whom.

Sr. No	Artifacts Details	Value
1	Operating System	Windows 10 Pro (2009)
2	Version Number	6.3
3	Installed/Updated Date/Time	7 Oct 2023 12:26:34.000 AM
4	Product Key	NJ2DT-78JQ8-XVBGG-PXVKK-FRG6P
5	Computer Name	DESKTOP-OJI62LR
6	Operating System Version	Professional
7	Build Number	19045
8	Product ID	00330-50222-14592-AAOEM
9	Last Shutdown Date/Time	18 Mar 2026 12:45:53.000 PM
10	System Root	C:\WINDOWS
11	Path	C:\Windows

2. USER PROFILE:

The User Profile contains key information about individuals who have used the computer. It includes the name of the user, the type of account they used, where their personal data is stored, when they last accessed the device, and the last time their password was changed. This data helps investigators understand who was using the device, what kind of access they had, and when they were active.

- **Username**

This is the name of the person or account holder who has used the device. It helps identify different users on the same system.

- **Type of User**

This shows whether the user is a local user (created only on this device), a domain user (linked to a larger network like in offices or institutions), or a system account (used internally by Windows or certain software). Understanding the type helps clarify the level of access and the role of the user.

- **Profile Path :**

This is the specific location on the computer's storage where the user's files and data are saved. For example, a typical path like C:\Users\Sandeep shows where that user's documents, browser data, and application files are stored.

- **Last Local Login:**

This shows the exact date and time the user last signed into the device. It helps in determining recent usage activity and whether the account was active during the time of interest.

- **Password Change:**

This shows when the password for the account was last changed. This can indicate whether the user was actively maintaining the account or if there might have been any recent changes suggesting suspicious activity.

Status:

All user profile information was examined to determine the users present on the system, the nature of their accounts, and their most recent activity.

Sr. No	Username	Type of User	Profile path	Last Local Login Date/Time	Last Password Change Date/Time
1		Built-in	%systemroot%\system32\config\systemprofile		
2		Built-in	%systemroot%\ServiceProfiles\LocalService		
3		Built-in	%systemroot%\ServiceProfiles\NetworkService		
4			C:\Users\User		
5	Darshan	Local User	C:\Users\Darshan	27 Mar 2026 2:36:40.000 PM	26 Feb 2026 11:13:24.000 AM
6	Guest	Local User			
7	Administrator	Local User	C:\Users\Administrator	27 Mar 2026 3:14:09.000 PM	9 Oct 2023 12:47:41.000 PM
8	WDAGUtilityAccount	Local User			7 Oct 2023 12:22:43.000 AM
9	DefaultAccount	Local User			

B. ARTIFACTS

1. Connected Devices:

1. USB Devices

Count: 45

Description: External storage devices like pen drives or hard drives used to move or copy data. These can carry user files or malware.

2. Your Phone Device

Count: 03

Description: Mobile devices connected using Microsoft's "Your Phone" feature. Enables syncing of texts, calls, and media.

3. Remote Desktop Protocol (RDP)

Count: 00

Description: Allows remote access/control of the desktop. May indicate authorized or unauthorized remote sessions.

2. Application Usages:

1. Feature Usage

Count: 166

Description: Records of system feature usage like accessibility tools, file explorer, or system settings.

2. Installed Microsoft Programs

Count: 34

Description: Microsoft applications such as Word, Excel, Outlook installed on the system.

3. Installed Programs (Non-Microsoft)

Count: 15

Description: User-installed software, including browsers, communication tools, or utilities.

4. Windows Defender Logs

Count: 08

Description: Logs from Windows Defender antivirus software, capturing scans and threat detections.

3. Communication:

1. Web Chat URLs

Count: 5334

Description: Links to web-based chat platforms (e.g., WhatsApp Web, Messenger) indicating chat usage.

2. Social Media URLs

Count: 83,049

Description: URLs linking to platforms like Instagram, Facebook, LinkedIn, Twitter, etc.

3. Malware/Phishing URLs

Count: 14

Description: Links designed to steal information or install harmful software on your device.

4. Pornography URLs

Count: 36

Description: Links directing users to adult content websites. These may pose legal, compliance, and security risks, including potential exposure to malware or malicious redirects.

5. Dating Site URLs

Count: 24

Description: Links directing users to online dating platforms. These may introduce risks such as data privacy exposure, social engineering attacks, and potential issue within the corporate environment.

4. Documents:

1. CSV Documents

Count: 159

Description: Raw data or logs stored in comma-separated format.

2. Microsoft PowerPoint Documents

Count: 20

Description: Presentation files used for discussions, lectures, or visual reporting.

3. Microsoft Excel Documents

Count: 64

Description: Spreadsheets used for calculations, lists, logs, and financial data.

4. PDF Documents

Count: 243

Description: Fixed-layout documents like contracts, bills, and receipts.

5. RTF Documents

Count: 3,636

Description: Rich Text Format files with styled text, common for documentation.

6. Text Documents

Count: 3,976

Description: Plain text files, often used for scripts, logs, or notes.

7. Microsoft Word Documents

Count: 61

Description: Word-processed documents such as reports, letters, and internal communication.

5. Email & Calendar:

1. Email Attachments

Count: 06

Description: Email attachments detected in local email clients.

2. EML(X) Files

Count: 95

Description: Archived or exported emails preserving full headers and metadata.

3. Windows Mail

Count: 00

Description: Emails and related information saved by the Windows Mail app, like messages and attachments.

4. Outlook Emails

Count: 00

Description: Emails found from Microsoft Outlook client.

5. Outlook Tasks

Count: 00

Description: Entries created in Microsoft Outlook to manage and track tasks, including due dates, reminders, and notes.

6. Outlook Contacts

Count: 00

Description: Saved contact details in Outlook, such as names, phone numbers, and email addresses.

7. Outlook Appointments

Count: 00

Description: Calendar events saved in Outlook, including meeting times, dates, and reminders.

6. Encryption & Credentials:

1. Encrypted Files

Count: 1979

Description: Files encrypted, potentially indicating attempts to protect or hide content.

2. Windows Stored Credentials

Count: 00

Description: Passwords and authentication data saved by Windows for accounts or services.

7. Media:

1. Audio

Count: 722

Description: Sound or voice recordings possibly related to user activity or media consumption.

2. Picture

Count: 1,66,730

Description: Includes personal photos, screenshots, and internet images.

3. Video

Count: 668

Description: Saved or downloaded videos that may show usage, recordings, or visual evidence.

4. Photoshop Files

Count: 173

Description: Edited or created images using Adobe Photoshop, useful for visual forensic analysis.

8. Operating System:

1. Logfile Analysis

Count: 5,095

Description: System logs showing user activity, shutdowns, errors, and access patterns.

2. Jump List

Count: 3,704

Description: Recently accessed files or programs used by the user via Start Menu or taskbar.

3. LNK Files

Count: 3,567

Description: Shortcut files referencing deleted or moved data, used to trace historical access.

9. Web Related:

Web Related Files

Count: Reviewed (No numerical count specified)

Description: Includes browser history, cookies, cache, downloads, and other web usage artifacts. All were examined during forensic review.

C. OBJECTIVE, PROCEDURE & OBSERVATION: - Laptop [Ex-1]

1. USB and External Device Usage

Objective:

To check whether any external storage devices such as USB pen drives or external hard disks were connected to the system and may have been used to access or transfer data.

Procedure:

The system was examined to identify records of USB devices connected to it. System logs and related records were reviewed to detect connected USB storage devices and their connection times.

Observation:

During the analysis, traces of evidence of USB connection history was identified on the system.

2. Network Connections (RDP Connection).

Objective:

To check whether the system connected to external systems or services that may allow remote access or data sharing.

Procedure:

Network-related records of the system were examined to identify connections to other systems or services, including remote access connections.

Observation:

During the analysis, traces related to Remote Desktop Protocol (RDP) connections were not identified on the system.

3. Web Chat URL / Communication Applications

Objective:

To check whether the system was used to access chat or communication platforms that allow users to send messages, files, or other information.

Procedure:

The system and browser records were examined to identify whether communication platforms such as WhatsApp or Facebook were accessed from the computer. The analysis included reviewing browsing history and related records to determine whether these services were opened or used on the system.

**Observation:**

Traces related to WhatsApp Web, Zoom, Telegram etc. was found in the browser history. These records indicate that these communication platforms were accessed from the system and may have been used for personal communication or sharing information.

4. Cloud Storage Service URL Usage

Objective:

To determine whether any cloud storage services were accessed or used from the system for uploading, downloading, or storing data.

Procedure:

The web browser history, installed applications, and system records were examined to identify access to cloud storage platforms (such as online file storage and sharing services). Downloaded files, uploaded files, synchronization folders, and login records were reviewed to assess cloud usage activity.

Observation:

Traces related to cloud storage services were identified in the browsing activity. These traces indicate that online file storage services such as Google Drive, Box, OneDrive, or similar platforms may have been accessed from the system.

5. All Email IDs Used in the Browser

Objective:

To identify all email accounts (both personal and company domain accounts) that were used on the computer's web browser.

Procedure:

The browser history and saved account information were examined to identify email IDs that were logged into or used on the system.

Observation:

Web-based login activity was identified on the system during the analysis. The login records indicate that the accessed accounts were within the organization, suggesting that the activity was limited to internal accounts.

6. Email Artifacts

Objective:

To determine whether any email software installed on the system was used to send or receive emails that may contain sensitive information.

Procedure:

The system was examined to check whether any email software, such as Microsoft Outlook, was installed and used on the computer. The analysis included checking for stored email data, email files, and other related records that would indicate that email communication was carried out through a locally installed email application.

Observation:

During the analysis, no evidence of email communication was identified on the system. The examination of available records did not reveal any email activity associated with the system during the relevant period.

7. Social Media URL Usage

Objective:

To determine whether any social media platforms were accessed or used from the system and to review related activity.

Procedure:

The system and browser records were examined to identify access to social media platforms. This included reviewing browsing history, saved sessions, and related internet records to determine whether any social media accounts were accessed from the system.

Observation:

During the analysis, evidence of social media URL usage like LinkedIn Twitter, YouTube , Teams, snapchat etc. was identified on the system. The examination of available records did reveal access to social media platforms during the relevant period.

E. ANALYSIS SUMMARY:

Sr. No	Objective	Procedure	Observation
1	USB and External Device Usage	System logs and artifacts were analyzed to identify USB device connections and data transfer activity.	Found Traces of evidence of USB device connection or external storage usage was identified during the analysis period.
2	Network Connections	Network-related records were reviewed to detect external connections, remote access, or data sharing activities.	No traces of Remote Desktop Protocol (RDP) or external remote access connections were identified on the system.
3	Chat / Communication Applications	Browser history and system records were examined to identify usage of communication platforms.	Evidence of WhatsApp, Facebook access was identified, indicating usage of communication platforms through the browser.
4	Cloud Storage Service Usage	Browser activity, installed applications, and system records were analyzed for cloud platform access.	Traces of cloud storage services (e.g., OneDrive, Google Drive, Box) were found, indicating possible data upload/download activity.
5	All Email IDs Used in Browser	Browser history and saved credentials were reviewed to identify email login activity.	Email login activity was observed, limited to organizational (internal) accounts.
6	Email Artifacts (Local Email Clients)	System was examined for installed email applications and stored email data.	No evidence of email communication through local email clients (e.g., Outlook) was found.
7	Social Media Activity Analysis	Browser history and session data were analyzed for social media platform access.	Social media usage was identified, confirming access to such platforms during the analysis period.
8	Dating Site Usage	Browser history and web artifacts were analyzed to detect access to dating platforms.	Multiple dating site URLs were identified, indicating usage of online dating platforms which may pose data privacy and policy risks.
9	Pornographic Website Access	Web browsing records were reviewed to identify access to adult content websites.	Presence of pornographic URLs was detected, indicating access to explicit content, posing compliance and potential security risks.
10	Malware / Phishing URLs	Web artifacts and browser history were analyzed to identify malicious or suspicious URLs.	Multiple malware/phishing-related URLs were detected, indicating potential exposure to malicious content and security threats.

APPENDIX

- **Exhibit Details:** The details of original exhibit.
- **Target Drive Details:** The acquisition of original exhibit in another hard disk for analysis purpose.
- **Capacity:** The size/storage capacity of hard disk.
- **Media:** Audio, Video, Pictures files considered as Media files.
- **LNK Files:** LNK files can be shortcuts to executable, media files, or any other type of file on the system. LNK files can be carved from many different areas of the OS, and the forensic importance of each type of LNK file varies from source to source.
- **JUMP List:** Jump lists are quick lists of recent applications or files that a user launched.
