INTRODUCTION

Date: 29/11/2025

To,

Jet Synthesys

Subject: Email Forensic Extraction Report

Dear Sir,

With reference to the above subject, I have received a request from you to conduct cyber forensic Audit. I have completed your case as per our standard procedures, our analysis has been reported on 29/11/2025

Scope of Work:

Conduct forensic Extraction of Google Takeout (Email ID) identified by the client for following events:

1. Email forensic extraction of the Email Id and identification of data transfer from outside the organization if any.

Terms and Condition:

1. The report has indicated the status of recovered data.
2. All Email data taken from Google Takeout for the purpose of analysis will be destroyed immediately after the report submission.

A. ARTIFACTS

1. Application Usages:

A.1.1 Cloud Google Activity

Google Activity refers to all user actions recorded by Google services when a person is logged into their Google account. This includes actions from web browsing, app usage, searches, YouTube, Gmail, Maps, Google Drive, Chrome, and Android devices.

Total **00** Nos of Cloud Google Activity trace were found in Google Takeout.

2. Communication:

A.2.1 Cloud Google Contacts

Google Contacts is a cloud-based service where Google stores a user's phone numbers, email addresses, organization info, and notes related to personal or professional contacts. It syncs automatically across Gmail, Android phones, and other connected devices.

Total **00** Nos of Cloud Google Contacts trace were found in Google Takeout.

3. Documents:

Document refers to, different types of Documents (MS Office Applications like Word, Excel, PPT Etc.)

A.3.1 CSV Documents

Comma-Separated Values files usually used to store raw data from databases or spreadsheets. Common in reports or logs.

Total **31** Nos of CSV Documents trace were found in Google Takeout.

A.3.2 Microsoft PowerPoint Documents

Presentation files often used in meetings, lectures, or project discussions. May contain visual evidence or user-created content.

Total **42** Nos of Microsoft PowerPoint Documents trace were found in Google Takeout.

A.3.3 Microsoft Excel Documents

Spreadsheet files used for calculations, lists, analysis, and logs. May contain critical data or records.

Total **125** Nos of Excel Documents trace were found in Google Takeout.

A.3.4 PDF Documents

Portable Document Format files used for sharing fixed-layout documents like receipts, scanned forms, or contracts.

Total **29** Nos of PDF Documents trace were found in Google Takeout.

A.3.5 Text Documents

Basic text files without formatting (.txt). Often used for logs, simple notes, or scripts.

Total **06** Nos of Text Documents trace were found in Google Takeout.

A.3.6 Microsoft Word Documents

Word-processed documents that may include letters, reports, or written records. A common artifact in investigations.

Total **32** Nos of Word Documents trace were found in Google Takeout.

A.3.7 Cloud Google Tasks

Google Tasks is a cloud-based task management tool integrated into Gmail, Google Calendar, and mobile devices. It allows users to create to-do lists, reminders, deadlines, and task notes, and is synced across devices linked to the same Google account.

Total **00** Nos of Cloud Google Tasks trace were found in Google Takeout.

4. Email & Calendar:

A.4.1 Email Attachments

Files sent or received as part of email communication. May include images, PDFs, or zipped files and often contain critical evidence.

Total **1,537** Nos of Email Attachments trace were found in Google Takeout

A.4.2 Cloud Google Calendar Events (Takeout)

Google Calendar is a cloud-based scheduling service that allows users to create, manage, and share:

- Events
- Meetings
- Reminders
- Invitations

Each event entry can contain metadata like time, location, attendees, attachments, links, and notes.

Total **193** Nos of Cloud Google Calendar Event trace were found in Google Takeout.

A.4.3 Cloud Gmail Messages

Gmail messages from Google Takeout are full exports of all emails sent, received, or drafted under a user's Google account. This includes metadata, message body, attachments, and headers. These emails are typically exported in MBOX format, a standard email archive format that can be parsed and viewed in various forensic or email clients.

Total **4,669** Nos of Cloud Gmail messages trace were found in Google Takeout.

5. Encryption & Credentials:

A.5.1 Encrypted Files

Files that are locked or secured using encryption, indicating an attempt to protect or hide the contents. May contain sensitive data.

Total **01** Nos of Encrypted Files trace were found in Google Takeout.

6. Media:

A.6.1 Picture

Images including personal photos, screenshots, and internet downloads. These may help identify locations, people, or activities.

Total **2,051** Nos of Picture trace were found in Google Takeout.

A.6.2 Video

Video files saved or recorded on the device, which may show activities, communications, or surveillance footage.

Total **39** Nos of Video trace were found in Google Takeout.

OBJECTIVE, PROCEDURE & OBSERVATIONS:

1) Verification of Google Account Data

Objective:

To confirm that the Google Takeout package contains all exported data associated with the user's Google account.

Procedure:

Extracted and reviewed all Google Takeout folders, files, and data structure for completeness and validity.

Observation :

- All Google service exports were found and readable including Gmail, Drive, Photos, and Activities.
- Data included professional files, personal data, app-related resources, general videos, and photo content stored under the Google account.
- "Logs Naksh India" data was also present in the exported Takeout archive.

2) Review of Gmail Usage

Objective:

To identify email communications related to Blinkshorts or company-linked activities.

Procedure:

Analyzed Inbox, Sent, Drafts, and exported MBOX/JSON email structure to identify subjects and themes.

Observation :

Project-related emails were discovered including subjects such as:

- Blinkshorts — Creator onboarding with MHS
- Daily Export Celeprime
- Official mail communications
- EBS Content Moderation Service Portfolio
- Fanory Actionables
- Fanory Commercial Summary
- Fanory DD
- Fanory December Review
- Fanory Blinkshorts meeting traces

These emails confirm involvement in multiple content-related projects including Blinkshorts.

3) Review of Google Calendar Events

Objective:

To identify any calendar entries relevant to business or project meetings.

Procedure:

Inspected calendar export for meeting scheduling patterns.

Observation :

- General meetings and follow-ups found.
- Meeting traces connected to Fanory-Blinkshorts collaboration were indicated by associated emails, although explicit technical milestone entries were not recorded.

4) Review of Google Drive Shared Files

Objective:

To identify collaboration through shared content.

Procedure:

Checked “Shared With Me” and “Shared By Me”.

Observation :

- Multiple Blinkshorts and project-related documents were shared with different collaborators.
- Spreadsheets, pitch decks, business documents were exchanged externally.
- Shows active collaboration across various partnerships.

5) Review of Google Drive Shared Permissions

Objective:

To determine if sensitive content was exposed externally.

Procedure:

Checked recipient access level and link-sharing setups.

Observation :

- Edit access granted to several shared files including Blinkshorts business files, spreadsheets, and presentations.
- Sharing included out-of-domain users, indicating potential external distribution of project-linked content.
- Some items were shared for view only, but others allowed full editing.

B. ANALYSIS SUMMARY.

Sr. No.	Objective	Procedure	Observation
1	Verification of Google Account Data	Extracted and reviewed all Google Takeout folders, files, and overall data structure to verify completeness and readability.	All exported data from Gmail, Drive, Photos, and Activity logs were present and readable. Included professional, personal, app-related files, general images/videos, and “Logs Naksh India” records.
2	Review of Gmail Usage	Examined Inbox, Sent, Drafts, and exported MBOX/JSON structure to identify relevant communication themes.	Emails related to Blinkshorts and various business engagements found. Subjects included onboarding, export summaries, commercial details, and team coordination messages confirming active involvement. Related traces in Annexure marked as “Review of Gmail Usage” in the folder named “saish.rohom Annexure ”
3	Review of Google Calendar Events	Analyzed exported calendar entries for business-related scheduling and follow-ups.	General meeting patterns observed. Collaboration between Fanory and Blinkshorts inferred via related email traces, although no detailed technical events recorded. Related traces in Annexure marked as “Review of Google Calendar Events” in the folder named “saish.rohom Annexure ”
4	Review of Google Drive Shared Files	Inspected “Shared With Me” and “Shared By Me” for collaborative project document exchanges.	Multiple spreadsheets, decks, and business files found shared with various external collaborators indicating active project involvement. Related traces in Annexure marked as “Review of Google Drive Shared Files” in the folder named “saish.rohom Annexure ”

5	Review of Google Drive Sharing Permissions	Checked shared access levels including edit/view permissions and link-sharing exposure.	Several documents granted edit access to external users, increasing risk of unauthorized modifications or information leakage. Some files restricted to view-only permissions. Related traces in Annexure marked as “Review of Google Drive Sharing Permissions” in the folder named “saish.rohom Annexure ”
