INTRODUCTION

Date: 29/11/2025

To,

Jet Synthesys

Subject: Computer Forensic Extraction Report

Dear Sir,

With reference to the above subject, I have received a request from you to conduct cyber forensic Audit. I have completed your case as per our standard procedures, our analysis has been reported on **29/11/2025**,

Scope of Work:

Conduct forensic extraction and analysis of the data provided by the client, which was copied from the Custodian Laptop. The examination will focus on the following:

1. Forensic analysis of the supplied Laptop data to identify any information, if any.

Terms and Condition:

1. The report reflects the findings based on the analysis of the data provided by the client.
2. All data received from the client for forensic examination will be securely destroyed immediately after the final report is submitted.

FORENSIC ANALYSIS ON “Ex-1 Saurabh Kushwah”

TOOLS USED FOR ACQUISITION AND EXTRACTION

Sr No	Tool Name
1	Magnet AXIOM Examiner v7.2.0.36145
2	Access Data® FTK® Imager 4.7.1.2

FORENSIC IMAGING

Details of acquisition are given below:

Sr. No.	Custodian Name	Evidence Tag	Acquisition Started	Acquisition Finished	Image Hash SHA1
1.	Saurabh Kushwah	Ex-1	Mon Nov 10 11:58:27 2025	Mon Nov 10 13:54:09 2025	c897f87deb4165db499335619 a728c79396fb9e4

A.OPERATING SYSTEM

1. OPERATING SYSTEM INFORMATION:

This refers to details about the installed OS (Windows, macOS, Linux, etc.), including version, system settings, user accounts, boot logs, and configurations. It's foundational for understanding how the device was used and by whom.

Sr. No.	Artifacts Details	Value
1	Operating System	--
2	Version Number	--
3	Installed/Updated Date/Time	--
4	Product Key	--
5	Computer Name	--
6	Operating System Version	--
7	Build Number	--
8	Product ID	--
9	Last Shutdown Date/Time	--
10	System Root	--
11	Path	--

B. ARTIFACTS

1. Connected Devices:

1. USB Devices

Count: 00

Description: External storage devices like pen drives or hard drives used to move or copy data. These can carry user files or malware.

2. Your Phone Device

Count: 00

Description: Mobile devices connected using Microsoft's "Your Phone" feature. Enables syncing of texts, calls, and media.

3. Remote Desktop Protocol (RDP)

Count: 0

Description: Allows remote access/control of the desktop. May indicate authorized or unauthorized remote sessions.

2. Application Usages:

1. Feature Usage

Count: 00

Description: Records of system feature usage like accessibility tools, file explorer, or system settings.

2. Installed Microsoft Programs

Count: 00

Description: Microsoft applications such as Word, Excel, Outlook installed on the system.

3. Installed Programs (Non-Microsoft)

Count: 00

Description: User-installed software, including browsers, communication tools, or utilities.

4. Windows Defender Logs

Count: 00

Description: Logs from Windows Defender antivirus software, capturing scans and threat detections.

3. Communication:

1. Web Chat URLs

Count: 17

Description: Links to web-based chat platforms (e.g., WhatsApp Web, Messenger) indicating chat usage.

2. Social Media URLs

Count: 00

Description: URLs linking to platforms like Instagram, Facebook, LinkedIn, Twitter, etc.

3. Malware/Phishing URLs

Count: 03

Description: Links designed to steal information or install harmful software on your device.

4. Documents:

1. CSV Documents

Count: 04

Description: Raw data or logs stored in comma-separated format.

2. Microsoft PowerPoint Documents

Count: 00

Description: Presentation files used for discussions, lectures, or visual reporting.

3. Microsoft Excel Documents

Count: 02

Description: Spreadsheets used for calculations, lists, logs, and financial data.

4. PDF Documents

Count: 349

Description: Fixed-layout documents like contracts, bills, and receipts.

5. RTF Documents

Count: 126

Description: Rich Text Format files with styled text, common for documentation.

6. Text Documents

Count: 2,713

Description: Plain text files, often used for scripts, logs, or notes.

7. Microsoft Word Documents

Count: 02

Description: Word-processed documents such as reports, letters, and internal communication.

5. Email & Calendar:

1. Email Attachments

Count: 00

Description: Email attachments detected in local email clients.

2. EML(X) Files

Count: 11

Description: Archived or exported emails preserving full headers and metadata.

3. Windows Mail

Count: 00

Description: Emails and related information saved by the Windows Mail app, like messages and attachments.

4. Outlook Emails

Count: 00

Description: Emails found from Microsoft Outlook client.

5. Outlook Tasks

Count: 00

Description: Entries created in Microsoft Outlook to manage and track tasks, including due dates, reminders, and notes.

6. Outlook Contacts

Count: 00

Description: Saved contact details in Outlook, such as names, phone numbers, and email addresses.

7. Outlook Appointments

Count: 00

Description: Calendar events saved in Outlook, including meeting times, dates, and reminders.

6. Encryption & Credentials:

1. Encrypted Files

Count: 254

Description: Files encrypted, potentially indicating attempts to protect or hide content.

2. Windows Stored Credentials

Count: 00

Description: Passwords and authentication data saved by Windows for accounts or services.

7. Media:

1. Audio

Count: 547

Description: Sound or voice recordings possibly related to user activity or media consumption.

2. Picture

Count: 36,327

Description: Includes personal photos, screenshots, and internet images.

3. Video

Count: 2,062

Description: Saved or downloaded videos that may show usage, recordings, or visual evidence.

4. Photoshop Files

Count: 226

Description: Edited or created images using Adobe Photoshop, useful for visual forensic analysis.

8. Operating System:

1. Logfile Analysis

Count: 00

Description: System logs showing user activity, shutdowns, errors, and access patterns.

2. Jump List

Count: 00

Description: Recently accessed files or programs used by the user via Start Menu or taskbar.

3. LNK Files

Count: 00

Description: Shortcut files referencing deleted or moved data, used to trace historical access.

9. Web Related:

Web Related Files

Count: Reviewed (No numerical count specified)

Description: Includes browser history, cookies, cache, downloads, and other web usage artifacts. All were examined during forensic review.

C. OBJECTIVE, PROCEDURE & OBSERVATION:

Saurabh Kushwah [Ex-1]

1) Cloud Storage Trace Review

Objective:

To determine whether cloud storage services such as Google Drive, OneDrive, or Dropbox were accessed or used to store, share, or transfer data.

Procedure:

Checked cloud-related folders, sync traces, and configuration files included in the logical dataset

Observation:

Cloud service URLs were found in the browser history, indicating that these platforms were accessed. No further activity could be assessed based on the provided data.

2) Image & Media File Review

Objective:

To inspect all image and media files for content that may be relevant to the investigation or indicate improper use of company resources.

Procedure:

Reviewed image/video folders, scanned available metadata, and examined file names and storage locations for context.

Observation:

A variety of media files were identified, including personal photos, logs, face-filter images, application icons, and several test videos. These findings indicate traces of both personal and application-testing activities captured and stored together.

3) Work Document Identification Review

Objective:

To locate any files or documents related to the company, projects, or client-sensitive information within the logical copy.

Procedure:

Searched filenames, document titles, using work-related keywords and scanned metadata for relevance.

Observation:

The system contained some current company project files along with other documents like invoices and guides. Several files also included ZEE-related data. Since the user is a former ZEE employee, keeping this ZEE data in the system is against company policy.

4) Web-Chat URL Activity Review

Objective:

To identify whether any web-based chat or messaging platforms were accessed on the system and to evaluate the nature of such activity.

Procedure:

Reviewed browser history, bookmarks, and exported browser files for URLs related to web-based messaging or chat services.

Observation:

Some web-chat URLs traces were found, indicating access to online messaging platforms. It cannot be confirmed whether any data was shared through these platforms.

5) Suspicious URL Review

Objective:

To identify any potentially malicious or suspicious URLs that could indicate malware, phishing attempts, or unauthorized external communication.

Procedure:

Scanned browser history, bookmarks, for unusual domains or signs of malware-related activity.

Observation:

Traces of URLs potentially associated with malware or phishing were found in the dataset. It cannot be confirmed whether any harmful activity occurred or whether company data was impacted.

E. ANALYSIS SUMMARY:

Sr. No	Objective	Procedure	Observation
1	Cloud Storage Trace Review	Checked cloud-related folders, sync traces, and configuration files present in the logical dataset.	Cloud service URLs were found in browser history, indicating access to platforms such as Google Drive, OneDrive, or Dropbox. No further activity could be assessed. Related Traces in Annexure Marked as “Cloud Storage Trace Review” in Folder Named “Saurabh Kushwah Data Annexure”
2	Image & Media File Review	Reviewed image/video folders, metadata, filenames, and storage locations to identify relevant or inappropriate content.	Media files included personal photos, logs, face-filter images, application icons, and test videos. The content reflected a mix of personal and application-testing activities stored together. Related Traces in Annexure Marked as “Image & Media File Review” in Folder Named “Saurabh Kushwah Data Annexure”
3	Work Document Identification Review	Searched filenames, document titles, and metadata using work-related keywords to identify company or project documents.	System had current files and other documents (invoices, guides). Some files contained ZEE data, which the ex-employee was not allowed to retain as per company policy. Related Traces in Annexure Marked as “Work Document Identification Review” in Folder Named “Saurabh Kushwah Data Annexure”
4	Web-Chat URL Activity Review	Reviewed browser records for URLs related to web-based messaging or chat platforms.	Traces of web-chat URLs were found, indicating that online messaging platforms were accessed. It cannot be confirmed if any data was shared through these platforms. Related Traces in Annexure Marked as “Web-Chat URL Activity Review” in Folder Named “Saurabh Kushwah Data Annexure”
5	Suspicious URL Review	Scanned browser history and bookmarks for unusual domains or malware/phishing indicators.	Traces of URLs potentially linked to malware or phishing were found. It cannot be determined whether harmful activity occurred or whether company data was affected. Related Traces in Annexure Marked as “Suspicious URL Review” in Folder Named “Saurabh Kushwah Data Annexure”

Note: The annexure “Annexure.zip” is a part of report and Details are as given below:

F. APPENDIX

- **Exhibit Details:** The details of original exhibit.
- **Target Drive Details:** The acquisition of original exhibit in another hard disk for analysis purpose.
- **Capacity:** The size/storage capacity of hard disk.
- **Media:** Audio, Video, Pictures files considered as Media files.
- **LNK Files:** LNK files can be shortcuts to executable, media files, or any other type of file on the system. LNK files can be carved from many different areas of the OS, and the forensic importance of each type of LNK file varies from source to source.
- **JUMP List:** Jump lists are quick lists of recent applications or files that a user launched.
