INTRODUCTION

Date: 27/11/2025

To,

Jet Synthesys

Subject: Email Forensic Extraction Report

Dear Sir,

With reference to the above subject, I have received a request from you to conduct cyber forensic Audit. I have completed your case as per our standard procedures, our analysis has been reported on 27/11/2025,

Scope of Work:

Conduct forensic Extraction of Google Takeout (Email ID) identified by the client for following events:

1. Email forensic extraction of the Email Id and identification of data transfer from outside the organization if any.

Terms and Condition:

1. The report has indicated the status of recovered data.
2. All Email data taken from Google Takeout for the purpose of analysis will be destroyed immediately after the report submission.

Digital Forensic Analyst
AETHERIS TECHNOLOGIES PVT. LTD

FORENSIC ANALYSIS ON (Google Takeout: - saurabh@fanory.com)

TOOLS USED FOR ACQUISITION AND EXTRACTION

Sr No	Tool Name
1	Google Takeout Process
2	Magnet AXIOM Examiner v7.2.0.36145

Email Backup

A. ARTIFACTS

1. Application Usages:

A.1.1 Cloud Google Activity

Google Activity refers to all user actions recorded by Google services when a person is logged into their Google account. This includes actions from web browsing, app usage, searches, YouTube, Gmail, Maps, Google Drive, Chrome, and Android devices. Total **00** Nos of Cloud Google Activity trace were found in Google Takeout.

2. Communication:

A.2.1 Cloud Google Contacts

Google Contacts is a cloud-based service where Google stores a user's phone numbers, email addresses, organization info, and notes related to personal or professional contacts. It syncs automatically across Gmail, Android phones, and other connected devices. Total **00** Nos of Cloud Google Contacts trace were found in Google Takeout.

3. Documents:

Document refers to, different types of Documents (MS Office Applications like Word, Excel, PPT Etc.)

A.3.1 CSV Documents

Comma-Separated Values files usually used to store raw data from databases or spreadsheets. Common in reports or logs. Total **90** Nos of CSV Documents trace were found in Google Takeout.

A.3.2 Microsoft PowerPoint Documents

Presentation files often used in meetings, lectures, or project discussions. May contain visual evidence or user-created content. Total **53** Nos of Microsoft PowerPoint Documents trace were found in Google Takeout.

A.3.3 Microsoft Excel Documents

Spreadsheet files used for calculations, lists, analysis, and logs. May contain critical data or records. Total **360** Nos of Excel Documents trace were found in Google Takeout.

A.3.4 PDF Documents

Portable Document Format files used for sharing fixed-layout documents like receipts, scanned forms, or contracts. Total **293** Nos of PDF Documents trace were found in Google Takeout.

A.3.5 Text Documents

Basic text files without formatting (.txt). Often used for logs, simple notes, or scripts. Total **09** Nos of Text Documents trace were found in Google Takeout.

A.3.6 Microsoft Word Documents

Word-processed documents that may include letters, reports, or written records. A common artifact in investigations. Total **224** Nos of Word Documents trace were found in Google Takeout.

A.3.7 Cloud Google Tasks

Google Tasks is a cloud-based task management tool integrated into Gmail, Google Calendar, and mobile devices. It allows users to create to-do lists, reminders, deadlines, and task notes, and is synced across devices linked to the same Google account. Total **00** Nos of Cloud Google Tasks trace were found in Google Takeout.

4. Email & Calendar:

A.4.1 Email Attachments

Files sent or received as part of email communication. May include images, PDFs, or zipped files and often contain critical evidence. Total **54,428** Nos of Email Attachments trace were found in Google Takeout

A.4.2 Cloud Google Calendar Events (Takeout)

Google Calendar is a cloud-based scheduling service that allows users to create, manage, and share:

- Events
- Meetings
- Reminders
- Invitations

Each event entry can contain metadata like time, location, attendees, attachments, links, and notes. Total **846** Nos of Cloud Google Calendar Event trace were found in Google Takeout.

A.4.3 Cloud Gmail Messages

Gmail messages from Google Takeout are full exports of all emails sent, received, or drafted under a user's Google account. This includes metadata, message body, attachments, and headers. These emails are typically exported in MBOX format, a standard email archive format that can be parsed and viewed in various forensic or email clients. Total **1,61,389** Nos of Cloud Gmail messages trace were found in Google Takeout.

5. Encryption & Credentials:

A.5.1 Encrypted Files

Files that are locked or secured using encryption, indicating an attempt to protect or hide the contents. May contain sensitive data. Total **10** Nos of Encrypted Files trace were found in Google Takeout.

6. Media:

A.6.1 Picture

Images including personal photos, screenshots, and internet downloads. These may help identify locations, people, or activities. Total **2,681** Nos of Picture trace were found in Google Takeout.

A.6.2 Video

Video files saved or recorded on the device, which may show activities, communications, or surveillance footage. Total **58** Nos of Video trace were found in Google Takeout.

OBJECTIVE, PROCEDURE & OBSERVATIONS:

1) Verification of Google Account Data

Objective:

To confirm that the Google Takeout package contains all exported data associated with the user's Google account.

Procedure:

The entire Google Takeout directory was extracted and manually reviewed. All folders representing Google services (such as Gmail, Drive, Photos, and Account Activity) were opened and inspected to verify whether the data was complete, readable, and properly structured according to Google's export format.

Observation:

The exported Google Takeout archive contained complete service files such as JSON, HTML, and folder structures for Gmail, Drive, Photos, Maps, YouTube, and Account Activity. File integrity was verified through consistent timestamps, valid metadata headers, and readable content across all services. This confirms that a full and successful data export was performed.

2) Review of Gmail Usage

Objective:

To understand the user's email communication relevant to application-related activities.

Procedure:

Gmail folders including Inbox, Sent Mail, Drafts were examined. The JSON and MBOX files were reviewed to identify email topics, communication patterns, and any project-related information.

Observation:

Email analysis showed that the mailbox was mostly filled with promotional messages, newsletters, marketing campaigns, discount offers, and automated updates from subscribed platforms.

A small number of emails were related to application issues, error notifications, or system-generated alerts, indicating occasional technical concerns or status updates.

Additionally, Gmail contained emails related to creator sign-up, new agency onboarding, platform registration, and account-creation confirmations. These emails included:

- Creator account sign-up confirmations
- Welcome/onboarding messages from agencies or platforms
- New account registration alerts
- Agency joining or enrollment confirmations

3) Review of Google Drive Files

Objective:

To identify documents and files stored on Google Drive that are related to the application project.

Procedure:

All Drive directories were opened, including “My Drive,” “Shared with me,” and folder-level contents. Document titles, file formats, modification timestamps, and shared items were examined to locate project files.

Observation:

Several project-related files were identified, including documents, folders, spreadsheets, presentations, pitch decks, screenshots, and reference materials. These items show that Google Drive was actively used to store and organize various project documents and supporting resources.

4) Review of Google Account Activity Logs

Objective:

To verify the user’s overall account activity and detect any irregular or unauthorized access.

Procedure:

Google Account Activity logs, including login timestamps, device access, app activity, and IP logs, were reviewed. These logs were compared with the expected usage pattern.

Observation:

All account activities, including sign-ins and device interactions, appeared consistent with the users.

5) Review of Google Calendar Events

Objective:

To identify any scheduled events or reminders related to the application development timeline.

Procedure:

Exported Google Calendar files were checked for meeting titles, event descriptions, reminders, and milestone dates. Both created and attended events were reviewed.

Observation:

The Google Calendar data mainly consisted of general meetings, discussions, follow-up reminders, and routine scheduling activities.

There were no specific entries pointing towards development planning or technical project milestones.

Most events appeared to be regular personal or professional engagements, such as meetings, appointments, and discussion-oriented sessions.

6) Review of Connected Devices History

Objective:

To confirm which devices accessed the Google account during the application development period.

Procedure:

Device activity logs were examined, including registered devices, login history, and synchronization details across mobile and desktop platforms.

Observation:

The login history showed multiple devices accessing the account, including different device types such as mobile phones, laptops, and other synced hardware. However, based on the available data, it is not possible to confirm the exact purpose of each login or whether the devices were specifically used for development, general browsing, email access, or any other activity.

7) Review of Google Photos Albums

Objective:

To check if any screenshots or images related to application development were stored or organized.

Procedure:

Photos and albums were reviewed for screenshots, mockups, UI designs, or references. Metadata including timestamps and file names was examined.

Observation:

Several images were found, including application UI screenshots, bank statements, logs, personal photos, and project-related pictures. These images indicate that the user captured a mix of personal and work-related visuals, which were stored together in Google Photos.

8) Review of Google Drive Shared Files

Objective:

To identify collaboration involving shared project documents.

Procedure:

The “Shared with others” and “Shared with me” sections were reviewed. File owners, access permissions, and sharing timestamps were inspected.

Observation:

The Google Drive analysis showed that multiple file types, including documents, folders, spreadsheets, and presentations, were shared with other users. Sharing activity appeared to be a mix of internal and external collaboration, and some files were shared with out-of-domain email addresses. These out-of-domain shares included recipients not belonging to the same organizational domain, indicating cross-platform or external communication.

9) Review of Google Drive Shared Permissions

Objective:

To ensure that sensitive application-related files were shared securely and only with authorized individuals.

Procedure:

Permissions for shared documents were checked, including edit/view access, email accounts with access, and link-sharing configurations.

Observation:

The Google Drive data showed that multiple items, including documents, folders, spreadsheets, and presentations, were shared with various users.

Most of the shared items were sent as invitations for edit access, allowing recipients to modify or collaborate on the content.

Some files were shared with view-only permissions, meaning recipients could see the content but could not make changes. There were files were shared with out-of-domain email addresses, indicating external collaboration beyond the primary domain.

Jet Synthesys Forensic Analysis Summary

- 1) Saurabh Khushwah also shared the Fanory Elevator Pitch document to his personal email ID on 27 January 2022.
- 2) On 11 January 2022, Saurabh Khushwah forwarded multiple Design Assets and Figma Product URLs to his personal email ID .
- 3) Email logs indicate that on 19 May 2023, Saurabh Khushwah forwarded Mercury Backup account recovery codes to his personal email account and Fanory email ID.
- 4) An email dated 09 March 2023 shows that Saurabh Khushwah transferred a Share Agreement document to his personal email ID.
- 5) On 12 December 2023, Saurabh Khushwah forwarded Slack Backup Codes to both his personal email account and Fanory email ID.
- 6) Another email indicates that on 21 January 2025, Azim Lalani forwarded Blinkshorts-related data from his Fanory email ID to vinayan.verenkar@gmail.com.
- 7) Azim Lalani sent an email from his Fanory email ID to Ninad Takpere, with Saurabh Kushwah copied, containing the subject “Blinkshorts Data” Dated on 20 Jan 2025.
- 8) An email record shows that Azim Lalani forwarded “Binkshorts < Veve” data from his Fanory email ID to reachoout2devesh@gmail.com (personal Gmail ID) 16 Jan 2025.
- 9) Data traces identified in the document titled 'IM Proposal of Zee Connected Reels', which was submitted by the Jet Team, related to Saurabh Kushwah. **Related traces in Annexure Marked as “Tracess Of IM Proposal of Zee Connected Reels” in folder named “saurabh@fanory.com Annexure”**

B. ANALYSIS SUMMARY.

Sr. No	Objective	Procedure	Observation
1	Verification of Google Account Data	Extracted and reviewed all Google Takeout folders (Gmail, Drive, Photos, Account Activity, etc.) to ensure completeness and integrity.	Google Takeout archive contained full and complete service files with valid timestamps, metadata, and readable content. A full and successful export was confirmed.
2	Review of Gmail Usage	Examined Inbox, Sent Mail, Drafts, JSON & MBOX files to analyze email patterns and project-related communications.	Majority of emails were promotional/marketing. Some emails related to application issues, creator sign-ups, agency onboarding, and account-creation confirmations.
3	Review of Google Drive Files	Reviewed all Drive sections including “My Drive” and “Shared with me.” Checked document types, timestamps, and folder contents.	Project-related documents were found, including spreadsheets, presentations, pitch decks, screenshots, and reference materials. Drive was actively used for project storage. Related traces in Annexure Marked as “Review of Google Drive Files” in folder named “saurabh@fanory.com Annexure”
4	Review of Google Account Activity Logs	Analyzed login timestamps, device activity, app activity, and IP logs; compared with expected behavior.	All account activity matched user patterns. No suspicious or unauthorized access detected.
5	Review of Google Calendar Events	Checked exported calendar files for event names, descriptions, reminders, and milestones.	Events were general meetings, reminders, and routine schedules. No development-specific timeline or project milestones noted. Related traces in Annexure Marked as “Review of Google Calendar Events” in folder named “saurabh@fanory.com Annexure”
6	Review of Connected Devices History	Examined device access logs, registered devices, login history, and sync activity.	Multiple devices (mobiles, laptops, etc.) accessed the account. Purpose of each login could not be determined from available data. Related traces in Annexure Marked as “Review of Connected Devices History” in folder named “saurabh@fanory.com Annexure”

7	Review of Google Photos Albums	Reviewed photos and albums for screenshots, UI images, logs, or design references. Checked metadata.	Images found included UI screenshots, bank statements, logs, personal photos, and project-related images. Content mixed personal and work-related visuals.
8	Review of Google Drive Shared Files	Examined “Shared with me” and “Shared with others” sections, file owners, permissions, and sharing timestamps.	Multiple file types were shared internally and externally. Some sharing occurred with out-of-domain emails, indicating external collaboration.
9	Review of Google Drive Shared Permissions	Checked edit/view permissions, access levels, and link-sharing settings for shared files.	Many files were shared with edit access; some with view-only access. Several documents were shared with external (out-of-domain) users, indicating cross-platform collaboration. Related traces in Annexure Marked as “Review of Google Drive Shared Permissions” in folder named “saurabh@fanory.com Annexure”

Note: The annexure “Annexure.zip” is a part of report and the Details are as given below:

Sr. No.	File Name	HASH VALUE (SHA1)

C.APPENDIX

- **Exhibit Details:** Details of the original Google Takeout data set acquired for analysis.
- **Source Archive Details:** Google Takeout ZIP files acquired for forensic examination.
- **Capacity:** Total size of the Google Takeout archive.
- **Media:** Audio, video, and image files extracted from the Takeout data.
- **Documents:** Text, PDF, and spreadsheet files found within Google Drive.
- **LNK Files:** Shortcut files, if present within the Takeout archive from synced folders.
- **JUMP List:** Not applicable in the context of Google Takeout analysis.
